

Perineal Tear Suture Trainer

Perineal Tear Suture Trainer is an in-house, cost-effective simulation model developed at LTHTR to support CPD in perineal tear management.

With reusable material, custom tear stages design, and two skin tones, it enhances interprofessional suturing skills, and helps improve patient care through realistic clinical practice.

Perineal Model

(Lighter / Darker Skin Tone)

£33.40/per unit

Following three design iterations and thorough testing for anatomical accuracy and stand functionality—approved by the Midwifery Lead—the Perineal Tear Suture Trainer was developed to enable users to create customised perineal tears.

Each trainer can form three to four different tear configurations, with each configuration suitable for up to three uses. Developed in-house, the product is currently in use during midwifery training sessions.
